The Development of Executive Control in Children from Preschool age through Adolescence: Clinical Applications

Hosted by:

June 7, 2013

Le Parc Conference Centre Thornhill, ON

Featuring

Dr. Karole Howland

Clinical Assistant Professor

Speech, Language and Hearing Sciences

College of Health and Rehabilitation Sciences (Sargent College)

Boston University

Dr. Howland will describe ECP, particularly focusing on developmental stages in acquiring inhibition, planning, working memory, sustained attention, and self regulation abilities. Each of these skills will be related to speech-language development, academic learning and social cognition. Methods to build executive control skills into the regular classroom routine and into speech-language therapy sessions will be presented
